

Operational Definition: High Speed Technological Scorecard and the Time Zero of Desires (TZD)

As aspirant transnational – supranational trend the HoA [...], requires a convergence in many domains geared by high technology, for instance, the public transportation from both outside-inside linkage to in be place. In the HoA there is a road transportation that awaits usage. Fully operationalizing it as well as opening new highways for the HoA Hypercity, just like the newly constructed two-lane cross river bridge at the Nigeria-Cameroon border [Buhari, Cameroon's Paul Biya Inaugurate Border Bridge In Cross River](#), is vital to please the TZDs.

24. Pictures of Public Transportation from both Outside and Inside

The above image (and this link: [Buhari, Cameroon's Paul Biya Inaugurate Border Bridge In Cross River](#)) unveils the about the newly inaugurated the linkage between Cameroon and Nigeria. It is a good example, in fact the HoA Hypercity requires more variety and fast modes, in order to network - the hypothetically design - the ports of Massawa and Assab of Eritrea as well as Djibouti City of Djibouti with five great cities of Ethiopia namely, – Addis Ababa, Dire-Dawa, Mekelle, Gondar, and Hawassa which in turn are linked south wards to Somalia's four major cities notably, Mogadishu, Beledweyne, Hargeisa and Bossaso.

A comparison of the technological scorecards as observe from the viewfinder that captures the longitudinal change in trade seems genius for me. For this purpose, the instant deliveries ‘McDonalds food’, or ‘purchase from amazons’ could be better compared against the old days trade. An image from Rosemary Sheel, a travel photographer, speaks volumes. It shows [Berber - traders](#) with their camels, taking goods to a village market, in Morocco, in 1997. In some areas of the HoA this mode is still there. However, since revealing only the negatives is less than satisfactory let’s hope the TZD are met with improved technological scorecards in the Hypercity design.

26. Any Image that can Metaphorize the Instantaneousness

the immediacy of the Demand/Supply Intersection
(Instantaneousness of this Intersection= zero time of desire)

copyright: [b2.jpg \(1000×604\) \(ibb.co\)](#)

copyright: [queue for water in the poor village of Elabored Photo - Alamy](#)

A convergent technological record and the time zero of desires is best depicted by the function of a multinational Bank of Africa, second largest bank in Djibouti, with its ATM ready for users who want to access. Fortunately, at least from the visual representation of this particular indexicality it shows us a TZD in the financial sector is sound and accomplishment. The financial system of all of the HoA is notably developed with the exception of Eritrea.

Eritrea's weak stand isn't only its financial TZD. In particular, *the images that metaphorize the instantaneity* (or, immediacy) *of demand and supply interaction* of diverse HoA's cases could be exemplified by the "[queue for water in the poor village of Elabored Photo - Alamy](#)," in spite of the government efforts' to secure water and construct dams. This imbalance, nevertheless, is common beyond water supply, too. In this section, I want to let you see beyond the visual material culture the imagery "Jerricans" can depict (referent) as a water container for the society into the depiction or visual representation of their unmet needs in real time in the TZD. One could easily infer from this poignant image that the subjects fetching water as individuals and as representatives of the community, whose demands or needs are not satisfied.

27. Images Of Multiple Participants In Zoom & Related Events

The globalization, and advancement in Information Technology and Internet has converge the planet more, in TZDs. My colleagues and I as working on issues of interest across boundaries explains it all.
