

Operational Definition: Strategic High-speed governance of (in)equality

This dimension of Hypercity design reveals the scientific citizenship aspect of the Hypercitizenship as a viewfinder of the case of HoA. Notwithstanding the significance of the democratization of scientific expertise and technological advancement, in the HoA the later, to some extent, is considered as impediment by the governors, which is also to the contrary of Pitasi's proposition.

30. Street photography of social stratification

When the issue of deportation came, it was not only contrary to the variety and density criterion of the Hypercity design, but it also signifies that the first of the three “T” of Hypercity or smart city development is compromised, i.e., **“Tolerance”**.

Normally Hypercities are made up of Hypercitizens, who practically manifest “you are different, but I still tolerate you or you are here, and I couldn’t avoid you.” That way variability, density, interconnection of tribes, ethnic groups, religious diversity remain, with no or little socioeconomic categorization as well as little, if any, insider-outsider dynamics visualization.

However, even the current civil war in Ethiopia, displayed with it the same story, and there is a crude news report revealing – vice, torturing, looting, dehumanization, imprisonment, and revenge over subjects of outgroup by each war actors. The general refugee and internally displaced persons (IDPs) in the country are mistreated for insider-outsider reasons.

32. High Speed Technology Symbols

High speed governance of inequality (equality) the Imagery shop of Safaricom, in Ethiopia and the deprived citizen bounded by the rusted watch.

Ethiopia Telecom and Safaricom Agreement is a turning point in the Ethiopian telecommunication history because it marks the sector's first privatization. The move toward making 4G and 5G networks accessible across the country is a sign of the government's unyielding efforts in regards closing the gap inequality in telecom availability. President Uhuru Kenyatta, on his part, has assured Ethiopians "Safaricom will help transform the country," positively, the powerful horizontal transmission will have its work.

The rust watch is picture-perfect representation of the sovereign states of HoA, mostly signifies the context of Eritrea, rated as the second [Country with the lowest internet penetration rate 2022 | Statista](#). Moreover, the huge protection walls (no internet and communication) the spirit of nationalism in the country is molded by exceptionally social engineering, monopoly state-owned medias. All these makes the area missing the other "T" component of development, i.e., "**Time.**" The other countries, I believe have a lot to learn from Ethiopia's newest journey.
