

Operational Definition: Horizon Memetic Patterns In Platform In World Within Intangibles

One of the points discussions in Pitasi's Hypercitizenship work, was/is Nikolas Nuhmanns' notation of *the enormous constellation of cosmopolitan and memetic recombinations* [...], as one great factor in shaping the Systemic Approach Paradigm Shift, it requires the global platforms, such as Facebook, Instagram and the like enable in the horizontal and vertical transmissions of complex memetics, possible. For some reasons, raised in the previous parts, the global platform needs standardization of the digital services, instruments, and devices to ensure and enable collaborative and open ecosystem so that it fosters the change and connections between the actors, in my envisaged Unita complex, in the HoA, but also connect it to the rest of the world. However, practically, the third element of the "T's" i.e., **Technology** isn't matured.

37. Universal or Global Platforms of Any Kind

(currencies, payment methods, fintech symbols, genome, language learning tools, mathematic formulas, computer language, medical imaging, data visualization ecc)

Universal *global platform* also includes any kind currencies, payment methods, fintech symbols, genome, language learning tools, mathematical formula etc., that potentially connect the parts. The ATM and electronic transfers in the HoA is a good point. However, beyond sovereignty functioning law, creation of Hypercitizens, and decent culture of coexistence, cosmopolitanism, and openness and equally as well as common acceptable currency should be vital essentials. I want to portray the fact that the refusal of the emerging Eritrean currency (grounded on the pictures on the notes) as a note and as propagated was co-driver of the former conflict with Ethiopia. Bygones are bygones, though, it should be a lesson to the constituents.

Notable, vertical transmission is the reduction of perspectives from forefathers to generations. This is amicably the dominant way of transmission, in HoA, given the limited opportunities. Thus, the African proverb "*when an old man dies, a library burns,*" resonates with genealogists. However, whenever vertical transmission is assumed as the only transmission misunderstanding occurs. The horizontal transmission e.g., Facebook, along with its no wall

policy gives all people in all language with no restrictions of grammar, spelling, or proficiency (easy to use) has created its popularity across the globe and HoA should exploit these virtues. Nevertheless, for one who is interested to study the use of internet, mass media use, and cultural recombination, closed countries like Eritrea would reveal peculiar findings. In this regard, the behavioral issues, for instance, insecurity or fear relating to friend request from a total stranger, although normal is likely. Nonetheless, this platform is used with different age ranges though only young people use it mostly in the case of HoA.

The government use FB and twitter for their own end, though they erratically cut these media wire in different political sceneries of the countries, accordingly to their verdict.

38. visualizing any shape of intangible added value

How societies conceive about gold, diamond, elephant ivory, has greatly changed by the way of thinking of the western colonists. The tangibles have the static meaning until the Westerners change the conviction, for example, the value of salt would not much greater than its dietary value. In actual fact, salt was once used as a measure of value or "salary," and [...] hence "the Latin word *salarium* linked employment, salt, and soldiers, the exact link is not very clear," though.

Now in the advanced time, the parties should think in systematization and standardization of scientific, educational, technology, as required and not only the workable currency and tax systems. For instance, the BEPS asserts states that multinational companies are exploiting them because the tax system is essential national based. Similarly, the human, and non-human horizontal global platform patters linkages and convergences, the intangibles, and the creation of value-added are by far essential. The HoA do not formalize many of the intangibles, including the IPR, still. The advice of all time is a virtue is required that government officials to put interests of citizens first and follow the race of development and chase for SBC, using a global outlook.
